/Prabodh M Dharia/
Primary Examiner, Art Unit 2629

1. **Status:** Please all the replies and correspondence should be addressed to Examiner's new art unit 2629. Receipt is acknowledged of papers submitted on 03-13-2008 under request for reconsideration, which have been placed of record in the file. Claims 1-5, 9-18, 20, 21, 24 and 25 are pending. Claim 6-8, 19, 22, 23 and 26 has been cancelled.

Response to Amendment

2. Applicant arguments filed on 03-13-2008, under remark regarding allowable limitations "For Claims 1-5, 9-18

a signal processor converting an input signal applied to the input terminal into an output signal to be recognized by the computer; a data interface coupled to the signal processor and connected between the computer and the display system; and a controller transmitting the output signal to the computer via the signal processor and the data interface and generating an activation control signal to the input terminal and an output terminal when the input signal represents an activation signal to initiate an increase in consumption of energy by an external apparatus coupled to the input and output terminal.

For Claims 20, 21, 24 and 25

receiving a video signal and transmitting an output signal via an input and output (I/O) connector disposed within the display device; alternatively selecting one of a first mode and a second mode; converting the input signal into a converted signal to be identified by a computer when the first mode is selected; transmitting the converted signal via the I/O connector to the computer for analysis; controlling a display of the display device in response to the input signal when the second mode is selected; making a determination of whether the input signal is a shut-down

Art Unit: 2629

signal or an activation signal for activating an external apparatus coupled to the I/O connector; and applying a control signal to the I/O connector to regulate energy consumption by an appliance coupled to the I/O connector in dependence upon the determination” are persuasive; as after further extensive search and consideration, independent claims 1, 9, 20, 24 and 25, do overcome the prior art rejection mailed on 11-14-2007, therefore the prior art rejection of 11-14-2007 is withdrawn; which puts application number 10032328 in condition for allowance.

Response to Arguments

3. Applicant’s arguments, see remark, filed 03-13-2008, with respect to Claims 1-5, 9-18, 20, 21, 24 and 25 have been fully considered and are persuasive. Therefore the rejection mailed on 11-14-2007 has been withdrawn.

Allowable Subject Matter

4. Claims 1-5, 9-18, 20, 21, 24 and 25 are allowed.
5. The following is an examiner’s statement of reasons for allowance:

Art Unit: 2629

Applicant's arguments filed on 03-13-2008 are convincing. As argued by applicant in remarks under claim rejection pages 8-22; prior art of Nakaiima et al. (US 2001/0055029 A1); Fung (US 6,859,882 B2); Boldt (US 4,251,759) and Hwang (US 6,121,962) with all of the other prior art cited on 892's 1449's, searched in NPL and searched in PGPUB, fails to recite or disclose all the other limitations of independent claims in combination with uniquely distinct features represented by underlined bold claim limitations recited below;

For Claims 1-5, 9-18

a signal processor converting an input signal applied to the input terminal into an output signal to be recognized by the computer; a data interface coupled to the signal processor and connected between the computer and the display system; and a controller transmitting the output signal to the computer via the signal processor and the data interface and generating an activation control signal to the input terminal and an output terminal when the input signal represents an activation signal to initiate an increase in consumption of energy by an external apparatus coupled to the input and output terminal.

For Claims 20, 21, 24 and 25

receiving a video signal and transmitting an output signal via an input and output (I/O) connector disposed within the display device; alternatively selecting one of a first mode and a second mode; converting the input signal into a converted signal to be identified by a computer when the first mode is selected; transmitting the converted signal via the I/O connector to the computer for analysis; controlling a display of the display device in response to the input signal when the second mode is selected; making a determination of whether the input signal is a shut-down signal or an activation signal for activating an

external apparatus coupled to the I/O connector; and applying a control signal to the I/O connector to regulate energy consumption by an appliance coupled to the I/O connector in dependence upon the determination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
